

# VSAM SDK

VSAM system development kit

## Description

The VSAM SDK is a solution for developing and testing contactless EMV acceptance on various services and facilities.

Each SDK comes in a suitcase with 5 VSAMs and a Level 1 certified EMV reader to test its functions. It includes:

- A complete VSAM payment application
- Deny list management
- Log list management
- PSP connection plug-in for different providers
- Virtualization examples for closed-loop systems
- Numerous debugging functionalities
- Mesh synchronization
- Support for many off-the-shelf Level 2 readers. Please consult us.

## Warranty

6 months

## Partnumbers

- VSAM SDK (I0282)

## Applications

- Secure on-line and off-line payment system
- Public transportation EMV integration

## Contents

- 5 VSAM devices
- 1 SCR916
- Software examples
- Documentation

## Support

The SDK comes with access credentials to the valuable resources as:

- VLIB Source code
- Protocol documentation of the VSAM to host
- communication and VSAM to EMV reader
- Source code of the implementation software
- Full source code of the Nano EMV A2 demo application

Besides the documentation, it includes:

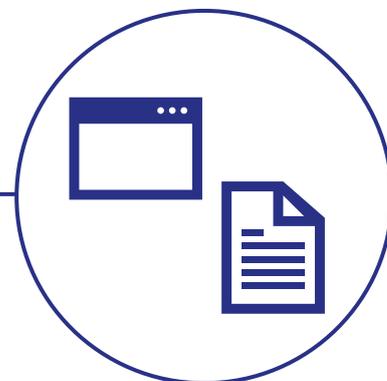

- E-mail support for up to 90 days after SDK receiving
- Ready to connect to different PSP providers
